

ETL Systems
New technologies
in RF distribution

Model Number:
22308-DIV82-Gx-Sy

32 x 8-way Active L-band Splitter Shelf

For Matrix Systems

The unit is designed to link ETL's range of matrices to make bigger matrix systems, while saving rack space and offering excellent RF performance.

Typical applications:

- Linking RF Matrices in expanding satellite teleports.
- Can be used for high density RF distribution chassis where rack space is limited
- As a replacement for non hot-swap passive systems to improve system design.

Fixed gain & Fixed slope compensation
factory set to balance
input signals

Compact 32 x 8-
way splitter modules
housed in a 7U high ,
19", rack mountable
chassis

Resilience from hot
swap splitter modules, hot
swap dual redundant
power supplies and hot
swap CPUs and hot-swap
combiner cards

Local monitoring
via status LEDs on
individual modules

850 - 2150 MHz
operating frequency
range.

**Remote control
& monitoring** via
RS232 serial & RJ45
Ethernet port with
SNMP & web browser
interface

**Dry contact alarm port &
serial communications**
for amplifier & power supply
status

Technical specifications and operating parameters

RF Parameters					
22308 Module slots used		Each splitter takes 1 slot. 32 slots available in chassis.			
Capacity		8-way splitter			
Frequency Range		850-2150 MHz (L-Band) *See application note below for use above 2150MHz.			
Gain		$x \pm 1$ dB		$x = 0$ to $+10$ dB. Nominal at 2150 MHz	
Slope		y dB positive slope		$y = 0$ to $+6$ dB. Typical slope across 850-2150 MHz.	
RF Connectors		50Ω SMA	50Ω BNC	75Ω BNC	75Ω F-type
Flatness	850-2150MHz	± 0.75 dB	± 0.75 dB	± 1.25 dB	± 1.25 dB
	Any 36MHz	± 0.5 dB	± 0.5 dB	± 0.75 dB	± 0.75 dB
Input Return Loss	Typical	18 dB	15 dB	12 dB	12 dB
	Minimum	14 dB	12 dB	10 dB	10 dB
Output Return Loss	Typical	18 dB	15 dB	12 dB	12 dB
	Minimum	14 dB	12 dB	10 dB	10 dB
Isolation	Card to Card	≥ 60 dB typical, ≥ 55 dB worst case			
	Port to port	23 dB Typical between any 2 output ports			
Noise Figure		14 dB Typical			
1dB GCP		$+7$ dBm 1 dB Gain Compression point, output power			
Input RF Power		$+16$ dBm Absolute maximum			

Note 1: The specification is subject to regular reviews and will be updated from time to time as part of our continuing product development and improved spec accuracy.

Note 2: Operation beyond the quoted limits stated above may cause instantaneous and permanent damage.

*Extended Frequency Use Application Note:

These cards may be used for frequencies above 2150MHz with little degradation to the return loss performance up to 3000MHz; but note that the insertion gain typically plateaus at 2150MHz (the slope pivot point). This lack of slope compensation is likely acceptable for short cable runs (<2m). Please contact ETL Systems for further information if required.

Environmental	
Operating temperature	0 to 55°C
Location	Indoor use only
Storage temperature	-20°C to +75°C
Humidity	85% non-condensing
Altitude	10,000 ft AMSL

Power		
PSU Power	100-240Vac 50/60Hz	Fused 2A, Dual IEC
AC Consumption	60W	
BUC Power	None	
PSU	Dual redundant	Diode OR
Hot-swap PSU	Yes	
RF Monitoring	None	

System Control		
Local Monitoring	Via card status LEDs	
Remote Monitoring	Via RS232 serial port & RJ45 Ethernet port 10/100 Base T. TCP/IP, SNMP & Web browser interface.	
Alarms	LED and via CPU in chassis	Also amplifier status monitoring via HMI when used in a switch matrix system

Physical	
Dimensions	7U high x 250mm deep x 19" wide
Weight	15 kg
Colour	RAL9003-White (semi-matte)
